[⊕] Test with RunKit   Report a vulnerability

npm-update-all

Update all dependencies & devDependencies in package.json at once.

Global installation is recommended for cli usage.

Install (cli)

```
$ npm install npm-update-all -g
```

CLI Usage

```
//  Navigate to project root , where package.json is located & run.

   $ npm-update-all
```

Install (project)

```
   $ npm install npm-update-all -D
```

Usage

```js
 // In your server.js/index.js , run following code.

var updateAll = require('npm-update-all');
var json = require('./package.json');

updateAll(json);
```

Keywords

npm-update   update all devdependencies   update all dependencies   package.json
